

## Level 3 - Java Program

This document contains a Java program that calculates the frequency of each digit (0–9) in a given number.

### Java Code

Program: Digit Frequency Counter

```
import java.util.Scanner;
public class Main {
    public static void main(String[] args) {
        int[] arr=new int[10];
        Scanner sc=new Scanner(System.in);
        int num=sc.nextInt();
        if(num<0){
            num*=-1;
        }
        int num2=num;
        int index=0;
        while(num2!=0){
            num2/=10;
            index++;
        }
        for(int i=0;i<index;i++){
            arr[num%10]++;
            num/=10;
        }
        if(num==0){
            System.out.println("frequency of 0 is 1");
            for(int i=1;i<10;i++){
                System.out.println("frequency of "+i+" is "+arr[i]);
            }
        }
    }
}
```

```
    }  
    else{  
for(int i=0;i<10;i++){  
    System.out.println("frequency of "+i+" is "+arr[i]);  
    }  
    }  
}  
}
```
