

Level 2 — Java Exercises

Problem 1 — Print Odd and Even Numbers (1 to n)

Description Create a program to print odd and even numbers between 1 to the number by the user.

Hint Check that the input is a natural number `for` loop Use a `1` `number` and print whether each is odd or even.

I/P => number

O/P => Example lines: `1 is odd` `2 is even` ...

```
import java.util.Scanner;

public class OddEvenToN {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int number = sc.nextInt();
        if (number < 1) {
            System.out.println("The number " + number + " is not a natural
number");
            return;
        }
        for (int i = 1; i <= number; i++) {
            if (i % 2 == 0) {
                System.out.println(i + " is even");
            } else {
                System.out.println(i + " is odd");
            }
        }
    }
}
```

Problem 2 — Employee Bonus Based on Years of Service

Description Give a bonus of 5% of salary to employees whose years of service is more years. Read salary and years of service and print the bonus amount.

I/P => salary, yearsOfService

O/P => Print bonus amount (0 if not eligible)

```
import java.util.Scanner;

public class EmployeeBonus {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        double salary = sc.nextDouble();
        int years = sc.nextInt();
        double bonus = 0.0;
        if (years > 5) {
            bonus = salary * 0.05;
        }
        System.out.println(bonus);
    }
}
```

Problem 3 — Multiplication Table from 6 to 9

Description Find the multiplication table of a number entered by the user for multipliers 8 and 9.

I/P => number

O/P => Lines in the format: `number * i = result` for i = 6 .. 9

```
import java.util.Scanner;

public class MultiplicationTable6to9 {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int number = sc.nextInt();
        for (int i = 6; i <= 9; i++) {
            System.out.println(number + " * " + i + " = " + (number * i));
        }
    }
}
```
